What are Data?  
What are Statistics?  
Why do they matter to me?  

Jane Fry  
May 9, 2017
Outline

- Definitions
- Dataphobia
- Data literacy
- Research data management (RDM)
- Why does this matter to you?
Data & stats

Why important?
- To support arguments, hypotheses and theories
- Provide snapshots in time
- Show changes over time
- Mentioned in the news often
What are data?

Interdisciplinary

“Facts or figures from which conclusions can be drawn.” (Statistics Canada)

“Characteristics or information, usually numerical, that are collected through observation.” (OECD)

“Facts, measurements, recordings, records, or observations about the world collected by scientists and others, with a minimum of contextual interpretation. Data may be any format or medium taking the form of writings, notes, numbers, symbols, text, images, films, video, sound recordings, pictorial reproductions, drawings, designs or other graphical representations, procedural manuals, forms, diagrams, work flow charts, equipment descriptions, data files, data processing algorithms, or statistical records.” (RDC)
Definitions (cont’d)

- **Why collect data**
  - To provide information
  - To help make informed decisions

- **Different types of data**
  - Numerical
  - Interviews
  - Radio signals
  - Digitized images
  - …
What are statistics?

- Interdisciplinary
- Numeric facts and figures created from data
- “Numerical data relating to an aggregate of individuals; the science of collecting, analysing and interpreting such data.” (OECD)
- “Statistics represent a common method of presenting information. In general, statistics relate to numerical data, and can refer to the science of dealing with the numerical data itself. Above all, statistics aim to provide useful information by means of numbers. Therefore, a good definition of statistics is “a type of information obtained through mathematical operations on numerical data.”” (Statistics Canada)
Definitions (cont’d)

- Statistics
  - Opposing view points
    - Elitist vs validation*

Dataphobia

- Stats are part of our everyday lives

- Statistics anxiety*
  - “Has been recognized as a deterrent to students finishing their degrees”
  - Can be slightly lessened
    - *If an instructor is there to help immediately*
    - *By encouraging students to talk about it*
  - Important because
    - “affects ability to understand research articles, data analysis, and interpretation of analyses”

*Source: Amanda S. Williams (2010)
“In theory, statistics should help settle arguments. They ought to provide stable reference points that everyone – no matter what their politics – can agree on. Yet in recent years, divergent levels of trust in statistics has become one of the key schisms that have opened up in western liberal democracies. Shortly before the November presidential election, a study in the US discovered that 68% of Trump supporters distrusted the economic data published by the federal government. In the UK, a research project by Cambridge University and YouGov looking at conspiracy theories discovered that 55% of the population believes that the government “is hiding the truth about the number of immigrants living here”.

“Critical thinking is a key skill in media and information literacy, and the mission of libraries is to educate and advocate its importance.”*

2 parts
- Understand
- Communicate

*Source: IFLA 2017
Be a better statistical consumer

  - How to spot spin and inappropriate use of stats
  - Some more advanced stats
Data literacy (cont’d)

- Reading charts and graphs*
  Need to know
  - What is being measured
  - What is the unit of measurement
  - What is the relationship between the two
  - What is the sample size
  - Comparing apples to oranges
  - Do the numbers add up (e.g. the pie chart)
  - Do the x and y axes start at 0 (where applicable)

Data literacy (cont’d)

Prisoners on death row, 1954-2006

*Source: J. Darragh (n.d.)
Think like a statistician – without the math

- Pay attention to detail
- See the big picture
- No agendas
- Look outside the data
- Ask why
HOW TO SPOT FAKE NEWS

CONSIDER THE SOURCE
Click away from the story to investigate the site, its mission and its contact info.

READ BEYOND
Headlines can be outrageous in an effort to get clicks. What’s the whole story?

CHECK THE AUTHOR
Do a quick search on the author. Are they credible? Are they real?

SUPPORTING SOURCES?
Click on those links. Determine if the info given actually supports the story.

CHECK THE DATE
Reposting old news stories doesn’t mean they’re relevant to current events.

IS IT A JOKE?
If it is too outlandish, it might be satire. Research the site and author to be sure.

CHECK YOUR BIASES
Consider if your own beliefs could affect your judgement.

ASK THE EXPERTS
Ask a librarian, or consult a fact-checking site.
Consider the source

- Check out the website
- Check out the contact info

Go one step further

- Don’t just read the headlines
- Read the whole story
- Check out the links
- Check out the references

Check the Author

- Are they credible
- Are they real

Sources

- **What are the supporting sources**
  - Do the links work
  - Do they support the data

The date

- Check the date
  - How recent is the data

Is it a joke?

- Is it satire?
- Is it too outlandish?
- Go beyond
- Research the site
- Research the author

Your biases

- Check your biases
  - Very important as a librarian
  - What are your beliefs
  - Are they affecting your judgement

Experts

**Ask the experts**

- The subject specialist
- The data librarian
- A fact-checking site
  - FactCheck.org
  - Snopes.com
  - The Washington Post Fact Checker
  - PolitiFact.com

- **Very important**
  - All data should be cited
  - Check out the citation
By the numbers
Statistiques sous la loupe

Student stats & facts

Research Data Management

- aka RDM
- aka data management
- aka DM

- What is it?
- Includes
  - Sound practices
  - Data curation
  - Data stewardship
- **Research data**
  - What are they important?
  - What is sharing?

- **Benefits of RDM**
  - Confirmation of original findings
  - Further research
  - Planning follow-up studies
  - Bonus …
• Metadata
  The key to research data re-use
  Standardized and structured
  Explains *everything* about the dataset
  • *Purpose*
  • *Time frame*
  • *Geographic location*
  • *PI(s)*
  • *Questions*
  • …
  • Who is the best person?
RDM lifecycle

Creating data
- design research
- plan data management (formats, storage, etc.)
- plan consent for sharing
- locate existing data
- collect data (experiment, observe, measure, simulate)
- capture and create metadata

dbroockman@stanford.edu
Joshua Kalla, Graduate Student, UC Berkeley, kalla@berkeley.edu
Peter Aronow, Assistant Professor, Yale University, peter.aronow@yale.edu

May 19, 2015

Summary

We report a number of irregularities in the replication dataset posted for LaCour and Green (Science, “When contact changes minds: An experiment on transmission of support for gay equality,” 2014) that jointly suggest the dataset (LaCour 2014) was not collected as described. These irregularities include baseline outcome data that is statistically indistinguishable from a national survey and over-time changes that are unusually small and indistinguishable from perfectly normally distributed noise. Other elements of the dataset are inconsistent with patterns typical in randomized experiments and survey responses and/or inconsistent with the claimed design of the study. A straightforward procedure may generate these anomalies nearly exactly: for both studies reported in the paper, a random sample of the 2012 Cooperative Campaign Analysis Project (CCAP) form the baseline data and normally distributed noise are added to simulate follow-up waves.

Timeline of Disclosure

- January - April, 2015. Broockman and Kalla were impressed by LaCour and Green (2014) and wanted to extend the article’s methodological and substantive discoveries. We began to plan an extension. We sought to form our priors about several design parameters based on the patterns in the original data on which the paper was based, LaCour (2014). As we examined the study’s data in planning our own studies, two features surprised us: voters’ survey responses exhibit much higher test-retest reliabilities than we have observed in any other panel survey data, and the response and reinterview rates of the panel survey were significantly higher than we expected. We set aside our doubts about the study and awaited the launch of our pilot extension to see if we could manage the same parameters. LaCour and Green were both responsive to requests for advice about design details when queried.
